

API SubID GuideLines

Guide to integrating and recovering an external identifier (SubID)

Using our SubID API, you can integrate the external identifier (SubID) of your choice into the **TimeOne** Performance tracking system.

This identifier (SubID) will be linked to your sales feedback and/or forms and will be inserted into your statistics at the same time.

1. IMPLEMENTATION

To implement your external identifier and incorporate it into the **TimeOne** Performance tracking process, add the variable: `&cb=YOUR_SUBID` to the platform's tracking URLs.

Integration example:

Basic HTML banner tag:

```
<a href="http://tracking.publicidees.com/clic.php?
partid=2&progid=109&promoid=54004&cb=YOUR_SUBID" target="_blank"></a>
```

Basic JAVASCRIPT banner tag:

```
<script type="text/javascript" src="http://tracking.publicidees.com/showbanner.php?
partid=2&progid=109&promoid=54004&cb=YOUR_SUBID"></script>
```

!! PLEASE NOTE !!

It is important to add the variable: `&cb=YOUR_SUBID` to all of the tracking ("a href" and "img src") so that identifier can be traced during postclick and postview actions.

CONTENT AND STRUCTURE OF THE "CB" SUBID VARIABLE

The "cb" variable must refer to the value of the external identifier (SubID) that you have chosen. However, your identifier contained in the "cb" variable must conform to a certain number of characteristics:

- It must not exceed 255 characters,
- It must not include any spaces,
- It may contain letters and numbers,
- It must not contain any special or accented characters (accents, spaces, &, etc.). If your identifier should happen to have any of these characters, you must encode it **before entering it as a parameter**.

2. QUERYING THE SubID API

Basic principle

Once your external identifier (SubID) has been integrated into the **TimeOne** Performance as a tracking system, you will be able to query our secure API in order to obtain any information relating to the sales and forms that you have generated through your external identifier.

To query our API, you must complete the following stages:

Contact our API at the following URL: **<http://api.publicidees.com/subid.php5>**

To this basic URL, you must add the mandatory parameters which allow you to log in, i.e. your secure key and your website identifier.

You will find a 'query' generator on your affiliate interface in the "Open Platform Menu" to create and grab urls with all parameters needed.

For information:

- The variable "p" for "your_identifier" is your affiliate site identifier (PARTID or Partner ID) and it's the same as the value of the "partid" parameter in your tracking links.
- The "k" variable for "your_key" corresponds to your secure key.

3. API WILL GENERATE AN XML FEED FOR YOU

Example of XML feed generated:

```
<partner id="8826">
<program id="189">
<name>
<![CDATA[ ProgramName ]]>
</name>
<action
id="123456789"
SubID="xxxyoursubidxxx"
actionDate="2015-06-01 09:42:18"
validationDate="2015-06-02"
actionStatus="1"
actionType="3"
programCommission="X.XXXEUR"
actionCommission="X.XXX"
cartAmount="YY.YY"
programComID="ZZZZ"
partnerComID="ZZZ2"
title="Sale"
programCurrency="EUR"
device="Desktop"/>
</program>
```

Description of each variable:

Variable Name	Description	Format
<partner id>	Your partner ID / PARTID	Numerical
<program id>	The program ID / PROGID	Numerical
Name	Program name	Alphanumeric
Action id	Order number	Alphanumeric
SubID	YOUR Subid pass through tracking links	As seen previously
ActionDate	Time of action was done	YYYY-MM-DD HH:MN:SS
ValidationDate	Time of action was validated	YYYY-MM-DD
ActionStatus	Status of Action	0 = action refused 1 = action pending 2 = action approved
ActionType	Type of action	3 = sales-based remuneration 4 = form-based remuneration
ProgramCommission	Your commission for this program	Numerical+Currency 1.23CUR
ActionCommission		Numerical 1.23
CartAmount	If provided, cart amount	Numerical 1.23
ProgramComID	The commission ID	Numerical
PartnerComID	The partner specific commission	Numerical
Title	Sale/Lead 'name' + 'Description'	Alphanumeric
ProgramCurrency	Currency of commission, 3 letters code	EUR / BRL / ZAR /USD /GBP...
Device	Device on which the action was made	Desktop/Tablet/Mobile

!! PLEASE NOTE !!

You can also query our API and generate a CSV file. You just need to add the variable '&csv=1'

4. REFINE YOUR QUERY

In addition to the mandatory query parameters, you can refine your search by adding additional parameters to the called URL.

!! PLEASE NOTE !!

When querying the API it is not possible to include the same variable several times in the call URL. You must therefore perform several calls.

a. Consulting statistics for a type of remuneration (sales, form):

Add the variable "t" with the value corresponding to the type of commission to the API's query URL:

- t = 3: sales-based remuneration

- t = 4: form-based remuneration

If the "t" variable is not entered, you will have both remunerations by default

b. Consulting statistics according to the status of the action (pending, approved or cancelled):

Add the variable "s" with the value corresponding to the type of commission to the API's query URL:

- s = 0: sale/lead cancelled

- s = 1: sale/lead pending

- s = 2: sale/lead approved

- s = 3: sale/lead approved and in a billing call

If the "s" variable is not entered, you will have the 3 statuses by default

c. Consulting statistics for a given date

Add the variable "d" to the API's query URL

- The date must be in the yyyy-mm-dd format

If the variable "d" is not entered, the current date will be the default date

d. Consulting statistics over a given period

Add the variable "dd" (for the start date) and the variable "df" (for the end date) to the API's query URL

- The date must be in the yyyy-mm-dd format

Example: &dd=2011-09-23&df=2011-09-30

e. Consulting statistics with an action or validation date (accepted or cancelled)

Add the variable "td" with the value corresponding to the type of date required

- td = a: to obtain the statistics with an action date - the date on which the sale or lead was recorded (for information, "td = a" is the default value taken into account)

- td = v: to obtain the statistics with a validation date - the date on which the advertiser approved or cancelled the sale/lead

f. Consulting statistics for a certain SubID identifier:

Add the variable "cb" with the value of the SubID identifier desired to the API's query URL

If the variable "cb" is not entered, you will have all your external identifiers by default

!! PLEASE NOTE !!

The "cb" variable will be encoded when inserted in the XML feed. You must therefore use the `urldecode()` function or an equivalent in order to find the original chain.

g. Consulting statistics with click display

Add the variable "c" to the API's query URL

- c = 1: display of number of clicks with detail per day

h. Grouping total shares by subID

Add the variable "&gb=" to the API's query URL

- gb = 1: display all commissions grouped by SUBID.

This variable works only if you are using our csv query.

!! PLEASE NOTE!!

All the parameters that we have shown can be accumulated, apart from:
The variable "d" (to perform a search on a given day) AND the variable "dd / df"
(to perform a search over a given period)
The variable "td=a" and "td=v". In fact, it is not possible to perform a search with
an "action" date and with a "validation" date

5. EXAMPLE OF QUERY

- Consulting statistics for a given day:

http://api.publicidees.com/subid.php5?k=YOUR_KEY&p=YOUR_ID&d=2015-01-15

- Consulting statistics for a period:

http://api.publicidees.com/subid.php5?k=YOUR_KEY&p=YOUR_ID&dd=2015-01-15&df=2015-01-20

- Consulting statistics with click display (only for the month in progress):

http://api.publicidees.com/subid.php5?k=YOUR_KEY&p=YOUR_ID&dd=2015-01-15&df=2015-01-20&c=1

- Consulting approved statistics for a given period:

http://api.publicidees.com/subid.php5?k=YOUR_KEY&p=YOUR_ID&dd=2015-01-15&df=2015-01-20&td=v

- Consulting approved statistics with a given SubID identifier:

http://api.publicidees.com/subid.php?k=YOUR_KEY&p=VOTRE_ID&dd=2015-01-15&df=2015-01-20&td=v&cb=YOUR_SUBID

- Consulting approved and pending sales between 2015-01-15 and 2015-01-20:

http://api.publicidees.com/subid.php?k=YOUR_KEY&p=VOTRE_ID&dd=2015-01-15&df=2015-01-20&s=1&t=3

AND

http://api.publicidees.com/subid.php?k=YOUR_KEY&p=VOTRE_ID&dd=2015-01-15&df=2015-01-20&s=2&t=3
